## Fitness Preparation Guidelines

### HOW THIS GUIDE WORKS

This guide provides you with advice and a sample workout to get you ready for Swab Summer at the US Coast Guard Academy. The main goal is to prepare you for the physical and mental demands of Swab Summer, and to get you physically fit. By preparing for Swab Summer you will reduce the risk of preventable overuse injuries such as shin splints and rhabdomyolysis.

### MUSCULAR STRENGTH

Muscular strength and endurance can be improved by systematically increasing the load (resistance) that you are using. Any overload will result in improvement, but higher intensity and effort will result in greater improvements. Start at a level that is easy for you to perform and complete, then add resistance gradually. Apply these general weight training principles when beginning the strength program.

### AEROBIC OR CARDIOVASCULAR FITNESS

Aerobic exercises are those that strengthen your heart and improve circulation. The running portion of the program has the following elements:

1. **Easy Run:** the largest part of the cardio program, completed as a single continuous run at a comfortable pace (not a jog). Talking to a running partner shouldn't be a problem, but if you can chat continuously, it may be too slow.
2. **Marathon Pace:** Faster than a long or easy run and still able to speak in sentences, but you should actively be thinking about running to hold this type of pace. You should never be exhausted finishing a marathon paced run. A session at marathon pace is a small part of the program and completed as either one continuous effort, or as two intervals with no more than 2:00 rest. Warm up and cool down before any Marathon paced run.
3. **Tempo Pace:** Faster than Marathon; you can still speak in a full sentence if asked, but you won't want to. A session at Tempo pace should be done as a single continuous run or repetitions as short as 4 minutes. Any tempo run should have a warmup and cool down.
4. **Mile/800 Meter Effort:** these workout sessions are conducted during weeks 4-7 and only after running the 1.5 Mile Time Trial during week 4. The goal paces for these workouts are listed on the "Recommended Running Pace" table on page 4 and are based off of your time from the 1.5 Mile Time Trial.
5. **Strides:** Running very fast, but smooth and under control. Aiming for 90% of maximum effort for the distance you are covering. Repetitions can range from :10 sec up to :30 sec. Rest between 1:00-1:30 between reps. Thoroughly warm up and cool down for any speed work.
6. **Non-running:** A day where you should do your scheduled time for running as a non-running cardio exercise, such as biking, swimming, etc.

## **FLEXIBILITY**

Muscles and joints become stiff and lose their range of motion with inactivity or activity overload. The Dynamic Flexibility and Movement Prep warm-up listed on page 4 is designed to maintain good joint mobility, reduce injury risk, improve the ability of your muscles to adapt to physical stresses, and enhance overall muscle performance. This is a whole body warm-up that target major areas of the body such as lower back, hips, hamstrings, quadriceps, shoulders, etc. If you feel the need to take a few extra minutes to stretch after the prescribed warm-up below, you may conduct static stretching by holding each stretch 10-20 seconds and any muscle group desired. Don't over-stretch to the point of pain and avoid bouncing movements.

## **RECOVERY**

Recovery is a critical part of your weekly training program. There are several ways rest is built into the program. First, there are times when a "Rest" day is planned, which means no exercise should take place. This will allow your body to rest and recover in an effort to prepare for the next conditioning session. Next, there are "Active Rest" components to the conditioning program that appear as "Non-Running" or "Easy-Runs". These are less intensive on the body, but still provide both valuable training opportunities and to aid in the recovery process.

## **CLOSING NOTES**

Although not every prospective swab will have identical levels of physical fitness, enclosed in this document, you will find a program to help get you ready for the demands of Swab Summer. You will find a Master Schedule (8 Weeks in total), followed by more detailed instructions on each of the components of the workout. This includes suggested paces for your runs, sample circuit training workouts, and an entry level swimming program.

Exercises should begin the first week in May in order to accommodate the full eight week training period.

Upon arrival at the Coast Guard Academy for Swab Summer you will be completing a Physical Fitness Exam (PFE). This exam will be given in the first week of training as well as at the end. Following the summer training period, cadets take the PFE two times a year. The PFE consists of push-ups (2 minutes), sit-ups (2 minutes) and a 1.5 mile run. The first two items measure the muscular strength and endurance of the upper body and the abdominals. The 1.5 mile run is a measure of your cardio-respiratory fitness.
